

VIRTUAL TERMINAL

Accept credit cards and manage payments online by leveraging your internet connection and web browser.

Recurring Payment Setup

Customer Profile

Electronic Receipts

Online Shopping Cart System

Credit Card Processing

System Scalability

Product Database

Secure Data

Benefits:

Recurring Payment Setup

- Customers can pay monthly fees and their large bills using scheduled, recurring installments.

Customer Profile

- Create profiles for your customers and save relevant information like buying history and payment information.

Seasonal Products or Businesses

- Your Virtual Terminal solution can be suspended during off-season months, so you do not pay any monthly fees. There is no cost to re-activate.

Security

- Data transmission is protected using (SSL) protocol; industry- standard Secure Sockets Layer. Sensitive Transaction data is secured behind internal layer defenses that prohibit direct access to transaction databases, unless provided with an authorized access role.

Process Credit Cards via Mail Order/ Telephone Order

- Get instant response by keying in the credit card information on your computer, tablet, or Smartphone.

Online Shopping Cart System

- Turn your website into a processing terminal with your Virtual Merchant ID number.

E-Receipts

- Email your customer an electronic receipt for their records, a convenient and environmentally friendly alternative to traditional paper receipts.

Product Database

- You can add, manage and edit a full product list (categories, pricing, titles and prices). This will allow you to assign an auto tax system to your products and track their performance.

Process payments from any tablet or computer browser

Payment Methods:

For some merchants, additional payment methods are:
